New and Improved Features

Full support for Windows 11

All Microsoft DLL files used in GraphiCode software have been updated to be compatible with Windows 10 and Windows 11. As a result of this change Windows 7 will no longer be a viable operating system for GraphiCode versions from this point forward.

Added Plugin functions

A number of plugin functions have been added to enhance the customization of the product. Details can be found within the Intellisense for the plugin.

Items Fixed since v29.2

This list is customer reported issues fixed for this release.

#709 Internal changes required the GWK to be re-serialized. This means files saved in this version will not be able to be read into older versions of GraphiCode products.

#701 Increased speed of file recognition, particularly on larger files. Previous version was taking a number of seconds to recognize even RS-274X files.
