New and Improved Features

Added Plugin functions

A number of plugin functions have been added to enhance the customization of the product. Details can be found within the Intellisense for the plugin.

Items Fixed since v32.1

This list is customer reported issues fixed for this release.

- #801 Updated code when loading Altium Drill files. The drill file contains drill sizes and co-ordinates in inches but lists drill sizes in mils within comments section. This was causing confusion and incorrect drill sizes during import
- #799 Updated the licensing code used to better comply with Windows 11 requirements.
- #798 Updated the version of .NET included with the installation package from 4.0 to 4.8
- #797 Fixed a crash with the Export Image File in the 64bit build.
- #789 Co-ordinate Summary page now dynamically resized to handle Japanese characters. Previous versions only partially displayed the Distance field.
- #788 Polygon issue fixed that caused Custom apertures to be incorrectly displayed. Problem was caused as a side effect of other polygon work in v24.1.
- #703 Chinese Characters within the Comments of a Gerber file no longer cause a Failure to Load.
