New and Improved Features

Internal enhancements

Work on the contour engine has taken place for this release with the incorporation of Artificial Intelligence (AI) to enhance the contour engine. While no specific GC-Prevue functions have reported bugs that have been fixed by this work the contour engine is fundamental to the functionality of out other products and the enhancements will be evident in better GWK files that can be opened in GC-Prevue.

Added Plugin functions

A number of plugin functions have been added to enhance the customization of the product. Details can be found within the Intellisense for the plugin.

Items Fixed since v32.2

This list is customer reported issues fixed for this release.

#809 The Plugin.chm help file is now included with the standard product installation package. Previously this file had been supplied on request.

#808 Mix color mode did not work optimally with certain layer color combinations. Issue has been resolved.

#806 Loading this DXF resulted in duplicated lines throughout the entire layer. This issue has been resolved. It was data specific.
